

# Economic Accounting Apps

planning, budgeting, managing, measuring

---

We created a **new breed** of apps for economic development, planning, and policy professionals, designed to support the entire state and local **economic development performance management** process.

---

## Multi-criteria planning app

Creating paths for sustainable development is the way to go. Our planning app puts pro forma economic impacts in a multi-criteria decision framework so planners and economic developers can easily work together across the diverse dimensions of sustainability. Enter development alternatives and decision criteria and weights, and our app does the rest, giving you rankings of alternatives. Use these rankings directly or meld the economic performance table into a comprehensive sustainable planning analysis.

## Private label apps

Go ahead, put your own brand on our economic accounting app. It's simple to do and perfect for industry associations, economic development agencies, and consultants. Your look, your brand, your workbook design, our life cycle accounting engine. Whether it's a simple online impact calculator app or an extension of our basic pro forma impact app, let's connect.

## Economic impact app

Get a workbook packed with industry, workforce, earnings, and energy data and charts that you can easily format. Simply enter your economic development scenario and we account for all connections over the production and income life cycles to produce pro forma impact budgets. Then, use the information in these workbooks to target opportunities for industry-to-industry connections and help improve the performance of your local economy.

---

Multipliers are an **outcome**, not an input.

See **opportunity**, act, and **measure**.

---

---

We bring economic **life cycle** accounting to planners, **multi-criteria** decision analysis to economic developers, and **energy** lifecycle accounting to all. **Accountability**, made simple.

---

### Our economic accounting engine

We trace production in a round-by-round manner back through the supply chain and forward through the spending of income, so you get an understanding of where connections weaken between supply and demand in your local economy, and which connections merit management, measurement and auditing. Our pro forma impact budgets can use an upper limit of local expansion capacities or a less aggressive local supply assumption. You choose, then challenge yourself to hit these performance targets.

---

**Pay per use** and the workbook is sent to your inbox **within a few minutes.**

Or **subscribe** and save.

---

### API for web developers

Web developers can integrate our life cycle accounting engine with their app using our RESTful API. Go to [api.decisioncommerce.com](http://api.decisioncommerce.com) for details.
